12v Dc Cfl Lamp Circuit Diagram

about 100 watts, it is suitable for normal lighting (all home lamps),

From the schematic diagram in Figure 1, the circuit will include four main sections:

1. It can drive a bulb, CFL, tube light, LED lamp, etc. up to 200W.
2. The circuit uses a transformer-less power supply to generate low-volt DC.
3. This circuit is a simple circuit to obtain a 5V and 12V DC power supply using one circuit.
